## Quiz 2.2 – Enthalpy

Name:
Ideal Gas Heat Capacities
$\circ$ Give the constant pressure heat capacities (in the low temperature limit) for perfect gases with the following geometries:
1. Monoatomic
2. Linear Diatomic
3. Non-linear Polyatomic
Definition of Enthalpy
$\circ$ What is the mathematical equation which relates enthalpy to internal energy?
$\circ$ Under what conditions is $\Delta_{rxn}Upprox\Delta_{rxn}H$
Pressure-Volume Work
$\circ$ A gas expands reversibly under isobaric conditions at $0.75~atm$ from $0.50~L$ to $2.75~L$ . What is the work done (from the perspective of the system)?
$\circ$ A pressurized tank with $V=15.0L$ contains a gas at $140.0atm$ . The tank is slowly leaking its gas into the atmosphere with a barometric pressure of $0.82atm$ . The leak is slow enough that the temperature remains constant throughout. What is the total work $(w_{sys})$ for the gas as it leaks? (Note that although this process is isothermal, it is not reversible since $p\neq p_{ext}$ )
$\circ$ A similar tank to the one above is mounted on the exterior of the international space station. This tank also experiences a leak like the one above. What is the total work $(w_{sys})$ for the gas as it leaks? (This process is not reversible either)

## Caged Bird

## By Maya Angelou

A free bird leaps on the back of the wind and floats downstream till the current ends and dips his wing in the orange sun rays and dares to claim the sky.

But a bird that stalks down his narrow cage can seldom see through his bars of rage his wings are clipped and his feet are tied so he opens his throat to sing.

The caged bird sings with a fearful trill of things unknown but longed for still and his tune is heard on the distant hill for the caged bird sings of freedom.

The free bird thinks of another breeze and the trade winds soft through the sighing trees and the fat worms waiting on a dawn bright lawn and he names the sky his own

But a caged bird stands on the grave of dreams his shadow shouts on a nightmare scream his wings are clipped and his feet are tied so he opens his throat to sing.

The caged bird sings with a fearful trill of things unknown but longed for still and his tune is heard on the distant hill for the caged bird sings of freedom.
